

Homework 3 Writeup

Instructions

- Provide an overview about how your project functions.
- Describe any interesting decisions you made to write your algorithm.
- Show and discuss the results of your algorithm.
- Feel free to include code snippets, images, and equations.
- List any extra credit implementation and result (optional).
- Use as many pages as you need, but err on the short side.
- **Please make this document anonymous.**

Project Overview

Overall, my project does not function well. I generally am struggling in this class, and though I am trying to keep up it is proving to be very difficult. I was able to comfortably complete the first two functions, but struggled immensely on the last 2.

Result

I was not able to gather results. While I thought my implementation generally showed my understanding, the code did not run as expected.

Extra Credit (Optional)

1. Implementation A, code snippets, and results

```
one = 1;
two = one + one;
if two == 2
    disp( 'This computer is not broken.' );
end
```

2. Implementation B, code snippets, and results

```
one = 1;  
two = one + one;  
if two == 2  
    disp( 'This computer is not broken.' );  
end
```
